

A Nuclear Free Gulf of Bothnia

The borough of Kalix is the first borough which has said No to nuclear power construction along the shores of the Gulf of Bothnia. Now other boroughs must follow the example!

The largest nuclear power facility in the world is being scheduled for construction on the Hanhikivi peninsula in Pyhäjoki, at close distance from the Swedish coast. The Gulf of Bothnia waters, together with its coast and archipelagos, is a world nique environment with very high values.

“A Nuclear Free Gulf of Bothnia” is a network free of party politics, open to all who wish to work to stop the construction of nuclear facilities in the Gulf area. Together we wish to strive for a sustainable development. Renewable energy, combined with more effective energy solutions, is the answer to the vast climate challenge which the world faces today. We wish to cooperate across all boundaries for a nuclear free world.
